

1 DIGITAL LITERACY PROJECT REPORT

Name: Sourindri Mondal

Program: B.Tech Computer Science

Course: Digital Literacy

Course Code - CSE0001

Registration No- 25BCE10873

Task 1 – Infographic on Digital Literacy

In Task 1, I created an infographic to explain the concept of digital literacy and its importance in everyday life. The infographic included key topics such as safe internet practices, strong password management, responsible social media usage, and awareness of online threats. I used Canva to design the infographic because it provides user-friendly templates and visual elements that make information easy to understand.

The objective of this task was to present complex information in a visually appealing and simple format. While designing the infographic, I learned how to organize information in a structured manner and highlight important points using icons, colors, and headings. This task also helped me understand that visual communication is an effective way to educate people about digital safety and responsible online behavior.

Overall, creating the infographic improved my creativity, design skills, and ability to communicate technical information clearly. It also increased my awareness of the importance of digital literacy in today's technology-driven world.

Task 2 – Digital Portfolio Creation

In Task 2, I created my digital portfolio by setting up professional accounts on platforms such as GitHub, LinkedIn, and Kaggle. These platforms are widely used in the technology industry to showcase skills, projects, and professional achievements. Creating these profiles helped me understand the importance of maintaining a professional online presence.

On GitHub, I learned how to create repositories, upload files, and manage version control. LinkedIn helped me build a professional network and create an online resume that highlights my education, skills, and interests. Kaggle introduced me to the world of data science and online coding competitions.

This task was important because employers and academic institutions often review online profiles to evaluate candidates. By completing this task, I have taken the first step toward building a strong digital identity that reflects my skills and professionalism. It also motivated me to continue learning and updating my portfolio as I gain more knowledge and experience in my field.

Task 3 – Coding & Collaboration Platforms

In Task 3, I explored online coding and collaboration platforms to understand how developers practice programming and share their work. I solved a beginner-level programming problem on HackerRank, which helped me practice basic Python concepts such as input, output, and arithmetic operations. This exercise improved my confidence in writing simple programs and understanding how online coding platforms evaluate code automatically.

Additionally, I created a Google Form quiz to demonstrate the use of online collaboration and data collection tools. The form was designed to collect responses from users and automatically store them in a spreadsheet for analysis. This helped me understand how digital tools can be used to gather and manage information efficiently.

Through this task, I learned the importance of collaboration platforms in modern education and professional environments. These tools make it easier to share knowledge, collect feedback, and work with others remotely. Overall, this task strengthened my technical skills and introduced me to practical tools used in real-world digital workflows.

Task 4 – Email Etiquette & Social Media Responsibility

Task 4 focused on developing professional communication skills, which are essential in academic and workplace environments. I drafted two formal emails: one to request an extension from a professor and another to express interest in a summer internship opportunity. While writing these emails, I ensured that they included clear subject lines, professional greetings, structured body paragraphs, and proper sign-offs.

In addition to email writing, I created a checklist outlining the do's and don'ts of social media usage for college students. This checklist emphasized the importance of respectful

communication, protecting personal information, avoiding the spread of misinformation, and maintaining a positive online image.

This task helped me understand that digital communication should be as professional and respectful as face-to-face communication. Poorly written emails or irresponsible social media behavior can create misunderstandings and harm one's reputation. By completing this task, I improved my ability to communicate clearly and professionally in digital environments.

Task 5 – Cybercrime Awareness Case Study

In Task 5, I researched cybercrime and created a case study focusing on phishing attacks, one of the most common forms of online fraud. Phishing typically occurs when attackers send fake emails or messages pretending to be from trusted organizations in order to steal sensitive information such as passwords, bank details, or OTPs.

In my case study, I described how a student might receive a fake message claiming to be from a bank or online service, asking them to click on a link and enter their personal details. Once the victim submits the information, the attacker can misuse it for financial fraud or identity theft. I also created a prevention checklist that included practical safety tips such as verifying website URLs, never sharing OTPs, enabling two-factor authentication, and reporting incidents through the National Cyber Crime Portal and helpline 1930.

This task increased my awareness of online threats and taught me how easily cybercriminals can exploit users who are unaware of security risks. It also encouraged me to adopt safer online habits and share this knowledge with others.

Conclusion

The completion of this digital literacy project has been a valuable and enriching learning experience that has significantly enhanced my understanding of how digital tools and technologies shape modern communication, education, and professional growth. Throughout the various tasks, I was able to explore multiple aspects of digital literacy in a practical and meaningful way rather than just learning the concepts theoretically.

By designing an infographic, I developed the ability to communicate important information in a visually engaging and simplified format. Creating professional profiles on platforms such as GitHub and LinkedIn helped me recognize the importance of building a positive and credible online presence, which plays a crucial role in academic and career opportunities. The experience of solving problems on coding platforms and using tools like Google Forms strengthened my technical skills and introduced me to collaborative digital workflows used in real-world scenarios.

Furthermore, drafting professional emails and preparing a social media responsibility checklist improved my understanding of appropriate online communication and digital etiquette. Researching cybercrime and creating a prevention guide made me more aware of the risks associated with online activities and taught me practical steps to protect myself and others from digital threats.

Overall, this project has not only improved my technical knowledge but also shaped my attitude toward responsible and ethical use of technology. It has encouraged me to continue learning, practicing safe online behavior, and using digital platforms productively for both personal and professional development.
